

**Amendment to Specification**

Please replace Paragraph [0005] with the following amended paragraph:

[0005] In a preferred embodiment the servicing equipment is mounted to the outside surface of the hub, and where the equipment to be lowered from and hoisted to the hub is lowered and hoisted to the hub at a front of the hub. Even more preferred, the servicing equipment is mounted by means of already available holes, said holes formerly used for hoisting the hub to the main shaft of the wind turbine. In a preferred embodiment, a connecting piece, preferably a collar of a connecting piece is provided with means for releasing adherence by the cement-like structure of the connecting piece to the hub
